User Management System

Developed by Aditya Godara (adityagodara03@gmail.com)

Project setup:

1. Download the Github repository zip file.
2. Download the config.js file provided by the developer.
3. Extract the zip file and paste the config.js file in the backend folder.
4. Open the whole extracted folder in VS Code or any code editor.
5. Write command to switch to the 'backend' directory.
6. Then, write 'npm i' that will install the required modules.
7. Then, write 'npm run dev' which will run the development server on port 5000.
8. Now open the 'index.html' file and you are good to go.

API Calls:

1. Get all users : /users (method: GET)
2. Get single user by ID : /users/:id (method: GET)
3. Register a user : /users/register (method: POST)
4. Update user details : /users/edit/:id (method: PUT)
5. Delete a user : /users/:id (method: DELETE)
